First author: Csapody I.

Year: 1982

forest management

soil - site

phytosociology

nature conservation

Notes

The relationship between Hungarian forestry research and vegetation research
I. Csapody and P. Jakucs

Tartalom:

A short characterization of the forestry conditions in Hungary

The history of the silvicultural application of the body of vegetation knowledge

Main fields of applications

Typological systems

Mapping of forest vegetation and of forest type

Regional forest cultivation (forestry regions)

Planning of forest cultivation

Rationalization of the tending of stands

Districts designated for seed collection and the management of gene pool preservation

The ecological basis of the wild animal economy

Vegetation and wood production researches

Vegetation research and nature conservancy
