Description:

1999

"This reserve has two age groups (160 and 40 years); it is gap-forming (collinar), beech forest with varied structure, ERTI experimental area. More than half of the Hungarian beech woodlands have similar site features; therefore, the research results can be widely generalized."

Horváth és Bölöni (2002) Az ER-ok kutatásszempontrú besorolása és rövid jellemzése 1999-ben
