Év: 2000

Összefoglalás:

Cost is a framework for scientific and technical co-operation, allowing the co-ordination of national programmes on a European level. Within this framework, financial support is given for the organisation of meetings, specific coordination tasks and for Short Term Scientific Missions. The research to be co-ordinated is funded nationally.

The Cost Action E4:

Forest Research Network was established by the COST Commission in 1995 in order to promote the research of "natural" forests. The objectives were to create a European network of forest reserves, to collect ongoing research, to standardise research methodology and to create an accessible central data bank. Results are important for the application of ecologically-oriented silviculture and for forest protection network planning. The duration of the action was 4 years, ending in November 1999.
